Verdant in one page

The whole journey of food in one place you can trust.

Verdant connects the people who grow food, the people who buy it, and the savings groups that keep farmers going. It is one connected system, not just an online shop.

Better markets

A shop for households and a dedicated buying tool for restaurants, hotels and supermarkets.

Simple tools for farmers

A phone app to record farms and harvests, sell stock, handle orders and get paid. It works without signal.

Food you can trace

Every harvest gets a permanent number. Buyers scan a code to see where their food came from.

Savings groups on a phone

The paper ledger of village savings groups, made safe and clear.

The problem and the plan

Three problems, two answers.

01

Soil is wearing out

Conventional farming drains topsoil and adds to climate change.

02

Buyers can't see where food comes from

Supply chains hide the origin and footprint of what we eat.

03

Farmers are left out of finance

No easy savings, credit, insurance or digital payments.

The marketplace

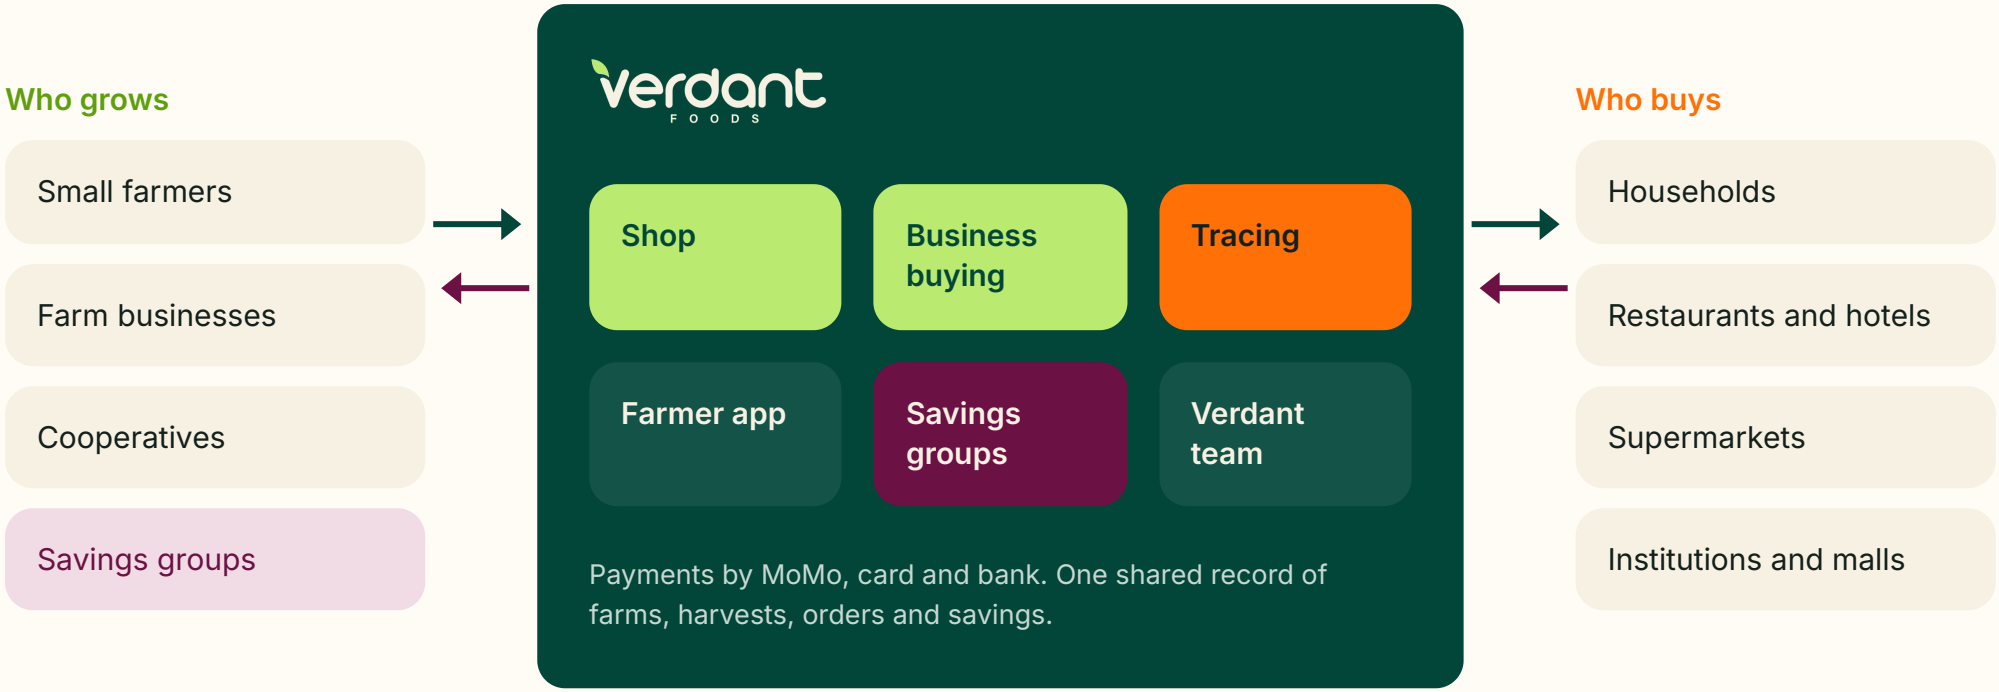

- Farmers sell straight to households and businesses
- Every harvest is recorded from seed to delivery
- A QR code on the order shows the full story

The money side

- Village savings groups move from paper to phone
- Fast payouts to farmers by Mobile Money
- Later: crop insurance and small investments

How it all connects

Food moves one way. Money comes back.

What the website includes

Six parts, one website.

Everything here is built in React / Next.js and previewed on Vercel. The farmer and savings app is planned in a separate document.

Verdant Foods Corporate Website

The brand home: about Verdant, for business, for farmers and impact.

AgTech Marketplace

The shop: categories, products, farms, cart and checkout through the Unified Payment Gateway.

AgTech Marketplace: Consumer Accounts

Orders, saved items, addresses and payment methods for shoppers.

B2B Procurement Engine

Live farm inventory, filters, wholesale bids, repeat supply and invoices for businesses.

Admin Interface

Verdant's control room: farm checks, products, orders, deliveries, payments and VSLA oversight.

Traceability Matrix: QR Journey Page

The public page a QR code opens, showing an order's journey from farm to door.

Names follow Verdant's Business Plan and Product Requirements. The Corporate Website is our addition, as the document does not name one.

Who uses the website

Four kinds of website user

Visitor

Browses the site and shop without signing in. Can check out as a guest.

Shopper

Buys quickly and tracks orders. Account tools stay light.

Business buyer

Restaurants, hotels and shops. Needs stock, bids, deliveries and invoices.

Verdant team

Checks farms, runs orders, deliveries and payments, and oversees everything.

User	Corporate Website	Marketplace	Consumer Accounts	B2B Procurement	Admin Interface	QR Journey Page
Visitor	●	●	—	—	—	●
Shopper	●	●	●	—	—	●
Business buyer	●	◐	—	●	—	●
Verdant team	●	◐	◐	◐	●	●

● Full use ◐ Limited or view only ● Comes in Phase 2 — No access

How the platform is built

Four layers. The backend belongs to Verdant's developer.

Open to everyone

- **Website** — Web
- **Shop** — Web
- **Trace page** — Opens from a QR code · Phase 2

After sign-in

- **Checkout and account** — Web
- **Business tools** — Web
- **Farmer app** — Android, works offline
- **Savings groups** — Inside the farmer app (separate plan)

Verdant team

- **Operations tools** — Farm checks, products, orders, deliveries, payments, tracing and savings-group oversight · Web

Backend

- **Built and run by Verdant's backend developer** — Accounts and roles, stock, orders and bids, harvest records and QR codes, savings ledger, payments, messages

Outside services: Mobile Money and bank payments from Phase 1, cold-chain delivery partners from Phase 2, weather data for crop insurance in Phase 3.

Verdant Foods Corporate Website

Where the brand is loudest and buying is quickest.

The website has one job: get people into the shop, or to the right tool if they are a business or a farmer.

Main menu

Shop

For business

For farmers

About Verdant

Shop fresh

"Trace your food" joins the menu in Phase 2, when the public trace page goes live.

Homepage, top to bottom

Hero	Fresh food and what makes Verdant different, with one "Shop fresh" button
Categories	Vegetables, fruit, herbs, tubers, grains and boxes as large picture tiles
Fresh this week	Live stock with the farm and harvest date
Stock-up packs	Home Essentials, Soup & Stew, Restaurant Starter
Farm to table	Farm, harvest, Verdant, you, told in pictures
Know your farmer	Who grew your food. The QR story is added in Phase 2.
For business	Leads restaurants and shops to the business tools
Farmers and impact	Verified results for profit, people and planet

AgTech Marketplace and Consumer Accounts

Buying comes first. The account is just a place to find your orders.

Orders Saved Addresses Payment methods Profile

Screen	What it does
Orders	The current order sits on top with its live status. Past orders have a one-tap "Buy again".
Order details	Each item shows the farm it came from and the delivery status. Phase 2 adds the QR story.
Checkout	Pay with MTN MoMo, Telecel Cash, AT Money, Visa or Mastercard. Guests can buy without an account.
Saved	Favourite products and farms.

Five steps to buy

1. Browse or search
2. See price, farm and harvest date
3. Add to cart, choose quantity
4. Address, delivery time, payment
5. Confirmation and SMS updates

Keep the farming story to one line in the buying path. The full story is one tap away.

B2B Procurement Engine

A working tool for kitchens and shops that can't run out.

Restaurants, hotels and supermarkets see live farm stock, filter by soil health and carbon data, place bids and set up repeat deliveries.

Overview | Find produce | Bids | Orders and deliveries | Repeat deliveries | Invoices | Suppliers

Section	What the buyer does there
Overview	Open bids, today's deliveries, spend this month
Find produce	Browse live stock by crop, farm, quantity and harvest date
Bids	Offer a price on a harvest. The farmer accepts, declines or counters once. Bids last 48 hours.
Repeat deliveries	Set a weekly or monthly supply schedule
Invoices	Pay by bank transfer or company card, then download receipts

Seven menu items

Finding produce and bidding happen in one flow, so buyers never jump between screens.

Speed over decoration

Dense lists, good filters, quick decisions. The brand shows in type and colour.

Admin Interface

The control room. Learn it once, use it all day.

Dashboard

Sales
Products · Harvests · Orders · Deliveries

People
Farmers and farms · Buyers · Savings groups

Trust
Farm checks · Tracing

Money
Payments and payouts

Settings
Reports · Users · Settings

Area	What the team does there
Dashboard	Sees what needs attention today: late orders, farms waiting for checks, failed payments
Farm checks	Approves farms, farming methods and harvests before they go on sale
Orders and deliveries	Follows every order to the door and spots problems early
Tracing	Reviews each harvest's journey and prints QR labels (Phase 2)
Payments	Matches payments in and payouts to farmers and groups

The menu is grouped under five headings so the team finds things fast. Every area uses the same filters, tables and status names.

Traceability Matrix: QR Journey Page

From harvest record to a story buyers can trust.

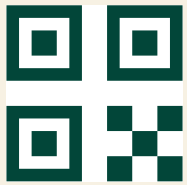

Phase 1 records every harvest. Phase 2 lets anyone scan the order's QR code and see the journey.

Farm	Harvest recorded	Harvest details	Quality check	Collection	Delivery	Buyer
Checked farm with location and farming methods	Gets its permanent trace number	Date, quantity, photos, soil and carbon data	Grade and pass or fail	Picked up by Verdant	Route and drop-off	Order arrives with its QR code

Trace number

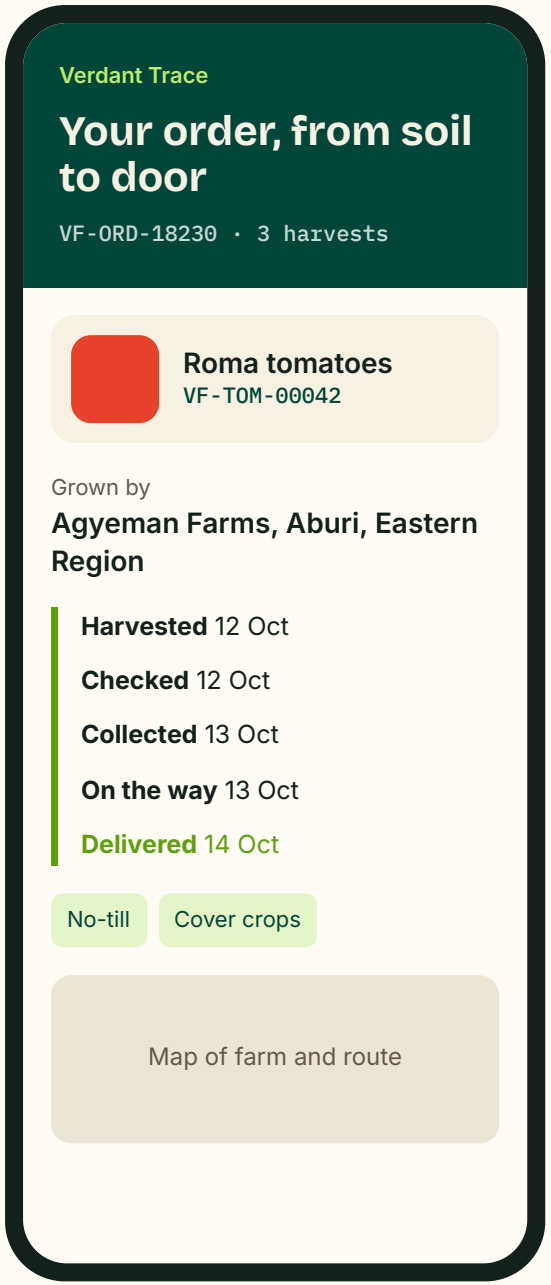

VF-TOM-00042

Verdant, crop code, number. One per harvest, never reused. The app keeps spare numbers so a farmer offline still gets a final one.

One QR code per order

Printed on the delivery label and receipt. It opens a page showing every harvest in the order. Business deliveries also get one per crate.

Traceability Matrix: QR Journey Page

What the trace page shows, in the order buyers ask

Part of the page	What it shows
1. What is it?	The order, its products, trace numbers and status
2. Who grew it?	The farm, the farmer and the region
3. What happened to it?	Harvest, check, collection and delivery with dates
4. How was it grown?	Checked farming methods only
5. Soil and carbon	Shown only when verified, otherwise left out completely
6. Where?	Map of the farm and route, when GPS is available

Farm and harvest photos on this page are real photos taken by the farmer, never stock or staged images.

Key journeys

The paths that must feel effortless

Shopper

1	2	3	4	5	6	7
Discover	**Compare**	**Pay**	**Track**	**Receive**	**Trace**	**Buy again**
Home, categories, search	Price, farm, harvest date	MoMo or card	Status by SMS	Delivered	Scan the QR (Phase 2)	One tap

Goal: from first look to paid order in five steps or fewer.

Business buyer

1	2	3	4	5	6
Sign up	**Find produce**	**Bid or order**	**Set repeats**	**Receive**	**Pay invoice**
Business details, delivery sites	Live stock, soil and carbon filters	Farmer replies within 48 hours	Weekly or monthly supply	Scheduled deliveries	Bank transfer or card

Goal: see stock, quantity and source at a glance, then act.

How screens should behave

Good design shows in the small moments

One job per screen
And one clear next step.

Action before numbers
Show what needs doing first.

Detail on demand
Open more only when needed.

Big targets on phones
Short forms, no wide tables.

Clear payment status
Never leave a buyer guessing.

Same words everywhere
One set of status names.

Real content
Ghanaian crops, farms and cedi prices.

Readable for all
Strong contrast, clear labels, keyboard friendly.

Every screen needs these states

Everywhere
- Loading
- Nothing here yet
- Something went wrong
- Saved as draft
- Sending
- Done

Buying
- Out of stock
- Waiting for payment
- Order confirmed
- On the way
- Delayed

Operations
- Draft
- Waiting for check
- Approved
- Rejected
- Counter-offer

How we keep the website simple

Our recommendations

Question	Our answer
Are the menus too long?	No. The Admin Interface uses 5 groups and the B2B Procurement Engine 7 items.
Does B2B have the right focus?	Yes. Built for speed, with bids as Verdant's document describes.
Is the shopper account too busy?	No. Orders first, "Buy again", and no charts.
Is the Admin Interface well organised?	Yes. Grouped by Sales, People, Trust, Money and Settings, with a queue for farm checks.
Is tracing pitched right for Phase 1?	Yes. Products show farm and harvest date in Phase 1; the public QR Journey Page goes live in Phase 2.
Can guests buy without an account?	Yes. Name, phone and address, with updates by SMS.

Look and feel

Verdant owns green. The food brings the colour.

The two greens come from the logo. The bright colours come from the references we chose: lively like a good market, always anchored by Verdant green.

Verdant green #024639	Night green #012B23	Leaf #5F9F0D
Fresh lime #BBEA70	Orange #FF7006	Tomato #E5412B
Sun #F7C33C	Blush #F4C4CF	Plum #6C1144
Cream #F7F1E3	Stone #ECE5D6	Grey text #62594C
Ink #13201B		

Website and shop use the full range for categories, offers and illustrations.

Business and team tools stay calm: mostly cream and green, with colour only in charts and status.

Farmer app is green and lime. **Plum** marks the savings group space.

Look and feel

Grown by Agyeman Farms. Cooked by you.

Bricolage Grotesque for headlines: bold, warm and food-friendly. Short lines, ending with a full stop. Used on the website and shop, never as big type inside work tools.

Inter, for everything you read and use

Available produce

Roma tomatoes · Agyeman Farms

Harvested 12 Oct · 340 kg left

Money and numbers

GH₵ 4,820.50

VF-TOM-00042

Trace and invoice numbers use a typewriter-style font so they are easy to read out.

Empty screen

No harvests yet

Log your first harvest to start selling.

Look and feel

What we take from the references

Big type with fresh produce	Homepage and campaign headlines, with produce overlapping the words
Bright colour blocks	Categories, offers and stock-up packs
Large money figures	Savings balances and farmer payments
Calm dashboards	Business, farmer and team tools
Tech in the field	Ghanaian farms with real tools at work, never stock photos

Four ideas that make Verdant recognisable

The trace frame

A thin frame and trace number around the hero produce

The Verdant crate

A stamped crate with produce rising out of it

Produce shapes

Flat, simple shapes for tiles and empty screens

One headline idea

"Grown by ___. Cooked by you."

Phones, tablets and computers

Designed for each screen, not shrunk to fit it.

Computer

Full layouts, tables with filters, a side menu in the work tools.

Tablet

The side menu becomes icons. Details slide in from the side.

Phone

Bottom menu and one main button. Tables become cards.

Example	Computer	Tablet	Phone
B2B inventory	Table	Shorter table	Cards
Menu	Top or side menu	Icon menu	Bottom menu
Filters	Always visible	Fold away	Opens from the bottom
Checkout	Two columns	Two columns	Steps, with a fixed pay button

Payments on the website

Pay the way Ghana pays.

MTN MoMo | Telecel Cash | AT Money | Visa | Mastercard | Ghanaian banks

Who	How they pay	Where
Shoppers and guests	MoMo on all three networks, or Visa / Mastercard	AgTech Marketplace checkout
Business buyers	Bank transfer or company card against invoices	B2B Procurement Engine
Verdant team	Sees every payment in and every payout out	Admin Interface

Every payment screen shows a clear "Waiting for payment" state until the payment provider confirms.

Roadmap

Build the base, then trust, then finance.

Months 1 to 6 | Months 7 to 18 | Month 19 onward

Phase 1: pilot

- Verdant Foods Corporate Website
- AgTech Marketplace with checkout
- Consumer Accounts
- B2B Procurement Engine with bids and repeat supply
- Admin Interface with farm checks
- Farm and harvest date on every product

Phase 2: tracing and delivery

- QR Journey Page goes public
- QR code on every order
- Collection and delivery tracking
- Soil and carbon filters fully live
- Better reports

Phase 3: finance

- Invoice financing for businesses
- Carbon rewards shown on farm profiles

Who builds what

Clear lines, so connecting the backend needs no redesign

	NEXKOOMSON builds	Verdant's backend developer builds	We agree together
Design	All screens in Figma, in every state		Status names and error messages
Data	Screens filled with realistic sample data	The database and business rules	The fields each record has
Sign-in	Login screens and who sees what	Accounts and permissions	The list of roles
Tracing	Harvest and trace page screens	Trace numbers and QR codes	Number format and journey steps
Payments	Checkout and payout screens	MoMo, card and bank connections	Payment status names
Hosting	Website code on GitHub, previews on Vercel	Backend servers	Test and live addresses

1. Sample data first

Screens work with realistic Ghanaian sample data.

2. Agree each connection

The backend developer confirms fields and messages.

3. Switch to live

One area at a time, tested on a preview link first.

What we need from the backend

Ten things that make connecting smooth

1. **Technical documentation** of what the backend offers
2. **How sign-in works**
3. **Roles and permissions**, so screens match the rules
4. **The fields** for farms, harvests, orders, bids, groups and users
5. **Status names**, so everyone uses the same words
6. **Sample responses and test logins**
7. **Photo upload rules** for farms, products and receipts
8. **Payment provider details** for checkout and invoices
9. **How trace numbers and QR codes are made**
10. **Test and live addresses**

Already set by Verdant's plan: secure connections, encrypted data, identity checks for wallets, and a modular backend. We build around these and don't redesign the backend.

How we work and what's next

Figma first. Test three screens, then build the rest.

1
Plan
Done: this document

2
Design Lab
Colours, type and building blocks in Figma

3
Three test screens
Homepage, Marketplace, Admin dashboard

4
Review
Approve the look before building more

5

Clickable, for Verdant to test

7
Build
React / Next.js from the approved designs

8
Preview and hand over
On Vercel, then connect the backend

Estimated delivery: 4 to 5 weeks, with planning, design and build overlapping where practical.

Decisions made

Key decisions for the website

Guest checkout	Yes. Name, phone and address; updates by SMS
Stock-up packs	Yes, as ready-made bundles. No shopper subscriptions in Phase 1.
Bids	Farmer accepts, declines or counters once. 48 hours to reply.
QR codes	One per order. Business deliveries also get one per crate.
Trace numbers	VF-TOM-00042, made by the backend
Payments	MTN MoMo, Telecel Cash, AT Money, Visa, Mastercard, Ghanaian banks
Photography	Art-directed photography and video for marketing; real farmer photos on records
Hosting	Previews on Vercel; Verdant's own account for launch

Verdant
FOODS

Product Architecture & UX Planning · Website

Based on the Verdant Foods Business Plan and Product Requirements (June 2026), the Verdant logo and the reference images chosen by NEXKOOMSON. Where this plan adds ideas beyond Verdant's document, they are shown as our recommendations.

Version 1.0 · October 2026 · INV-NKL-00704 · NEXKOOMSON for Verdant Foods
